

# **Mobieus Systems takes the guesswork out of integrating “The Cloud” for small businesses and organizations, letting you reap the benefits**

If you are a business owner, you surely understand the power and necessity of computers to remain relevant in today's fast-paced economy. Perhaps you have integrated them to an extent but find the cost of upgrades to hardware and software are a burden. Finding the timely support you need in the face of complications may be difficult and exhausting or perhaps you are simply unsure how fully integrating modern technology will benefit your business.

“The Cloud” is something we've all heard of but to many, the benefits of integrating it into your workflow are vague or unclear. Walter Chomak, owner and CEO of local Cloud Service Provider Mobieus, wants to take the guesswork out of joining this technological revolution and help your business thrive to its fullest extent.

Mobius Systems is headquartered in Boston, Massachusetts but has roots in New Bedford. Walter is a New Bedford High graduate and grew up right here in the Southcoast. Founded in 2011 by Microsoft and IBM alumni, it aims to bring the knowledge gained designing for major enterprise data centers to small businesses and organizations like yours. Price and technical barriers should not prevent you from integrating a

service that will allow you to run your business more effectively and save money in the process. Sound too good to be true? It's not.

Chomak explains, "The traditional desktop is expensive and is holding back productivity. Our virtual desktop solution, mCloud, is designed to save you money and increase workplace efficiency while maintaining a super secure environment which can be accessed from any device on the go – laptops, tablets, mobile phones, etc. – so you are no longer bound to a specific computer to get your job done."

Another beauty of a virtual desktop solution is that it can make otherwise obsolete computers relevant again. When prompted for real-world examples of Mobieus Systems' effectiveness, Chomak was pleased to share one of his recent successes.

"Saint John Paul II Catholic Academy had over two hundred old computers slated for disposal because they were too old to upgrade and the cost to purchase new ones was too large. With mCloud, we were able to resurrect the old computers and redeploy them into all their classrooms. They are now running our Zero Touch software and can connect to a private cloud running the latest software and applications, unlocking potential that the administration had thought was lost. Costs plummeted, computer usage skyrocketed and both students and faculty became much more productive because they had necessary applications running simply and securely."

Another example Chomak was eager to share illustrates the simplicity users experience in adopting this technology. He described the day mCloud went live at Trinity Catholic Academy in Brockton. He had just finished setting up when students entered the lab and excitedly jumped on the computers and started working. They were children of 10-13 years and no additional instruction was needed. The simplicity of the design had manifested in reality and the students were proof that mCloud was as easy to use as Mobieus had promised.

Chomak's experience in this field is extensive. Before starting Mobieus, he worked as a Senior Consultant with Microsoft for over six years, specializing in Cloud technology before the term "Cloud" had even been coined. His ability to customize a working environment so customers do not feel they need to compromise their needs is bar none. Beyond his team's commitment to the customer experience, Chomak says the company stands by their products, offering no contract pricing and no minimums. The software is packed with features that other companies normally charge for and the team at Mobieus is

dedicated to assisting their clients every step of the way. "Customer service is something we take very seriously."

At the end of the day, **Mobieus** exists to reduce operational costs and increase productivity for companies looking to conserve capital. Businesses typically see 30-50% reduction in operational expenses after migrating to a hosted virtual desktop solution. They offer a pay-as-you-go model with no upfront capital required. Your IT department will spend less time on day-to-day tasks and with no infrastructure to manage and support, you can focus on business development and innovation. If having more time and money to dedicate to your business sounds good, you'll want to consider the benefit of letting Mobieus Systems design a cloud-based work environment that will work for you.
